

## Release notes for build 1.3.8056

Evaluation expires 31/5 2009

- Support for linux compiz extension
- Audit functionality correction

### Support for linux compiz extension

GoToDevice now supports remote control of linux where compiz is enabled. Compiz is as default enabled in most never distributions distributions. Previously GoToDevice could not remote control the desktop if compiz was enabled.

### Audit functionality correction

The Node incorrectly ignored the “ignore if audit fails” setting. Meaning that no Manager could connect to the Node if There was an error during auditing.
